## RESEARCH INTERESTS

---

The primary goal of my research is to develop fundamental concepts and new solutions for big data analysis and management related to smart energy. My current work has concentrated on three key areas: Building scalable systems for big data analysis and management in the cloud; Using statistics, data mining and machine learning technologies to extract information from big data to support decision makings; Developing synergy solutions for smart cities in the disciplines, including energy economics and modelling, climate economics and science, information and communication technologies.
